## Introduction:

We are creating a trades website where customers can post items they want to trade/sell. Much like an ebay clone. Other users can search for items using category or name etc. The idea is to connect to customers that wants to make a deal. For this website we need a design with the following requirements.

Requirements:

- HTML5 compliant
- Single page application
- Navbar at the top – **width 100% height 100px**
- We want a row on both sides. Within these rows we want to put recent activity, this could be latest posts etc. **Width 25% height 100%**
- Between these rows we want the content section. **Width 50% height 100%**
- Leave both rows empty to begin with.

Additional info:

Theme and color is up to you as we don't have a fixed design other than the picture provided. But please implement chosen styles in a separate style sheet so we can easily modify at later stages.

If you have time to make a small logo we would appreciate that.

Payment:

Fixed budget at maximum 120 USD
